## TRADEWEB REPORTS SEPTEMBER 2021 TOTAL VOLUME OF \$21.7 TRILLION AND AVERAGE DAILY VOLUME OF \$1.02 TRILLION

Average daily volume (ADV) for the month was \$1.02 trillion (tn), an increase of 17.4 percent (%) year over year (YoY). For the third quarter of 2021, ADV was \$964.5 billion (bn), an increase of 23.6% YoY. Average daily trades for the month totaled 62,513.

In September, Tradeweb facilitated a record \$887 million per day in U.S. High Yield credit. Tradeweb also set ADV records in both U.S. government bonds and European government bonds. In addition, client adoption of the request-for-market (RFM) protocol drove record SEF share for swaps  $\geq$  1-year.<sup>1</sup>

For the third quarter of 2021, Tradeweb set new records in TRACE market share in both U.S. High Grade and U.S. High Yield, capturing a quarterly record 12.6% and 6.2%, respectively, for fully electronic trading. U.S. government bond ADV was also a record.

## RATES

U.S. government bond ADV was up 49.3% YoY to \$134.3bn<sup>2</sup>, and European government bond ADV was up 27.2% YoY to \$34.4bn.

Record activity in U.S. government bonds was driven by a combination of factors: record institutional activity; the further adoption of innovative protocols including streaming and sessions-based trading; strong quarter-end activity; and the addition of the Nasdaq Fixed Income business. Record activity in European government bond trading was led by very strong activity in UK Gilts. Steady global government bond issuance, along with recent rising market volatility, remained supportive of trading.

**Mortgage ADV was down 8.7% YoY to \$179.6bn.**

Declining issuance and record home price appreciation weighed on overall market activity.

**Swaps/swaptions  $\geq$  1-year ADV was up 18.7% YoY to \$187.8bn, and total rates derivatives ADV was up 15.8% YoY to \$276.7bn.**

Swaps/swaptions  $\geq$  1-year volumes were driven by robust client interest in the request-for-market (RFM) protocol and continued engagement from international clients, resulting in record SEF share for these tenors. Emerging markets exhibited strong growth due to the continued adoption of electronic trading.

## CREDIT

U.S. Credit ADV was up 32.0% YoY to \$5.8bn and European credit ADV was up 23.2% YoY to \$2.0bn.

Exceptionally strong growth in U.S. and European credit was driven by client adoption of the request-for-quote (RFQ) protocol and continued growth of portfolio trading. U.S. High Grade TRACE market share was 21.0%, of which 11.9% was traded fully electronically. U.S. High Yield ADV was a record on the platform with TRACE market share of 9.4% (6.1% fully electronic).

**Credit derivatives ADV was up 6.9% YoY to \$28.3bn.**

Semiannual rolling activity as well as continued bouts of volatility boosted market activity generally.

## EQUITIES

U.S. ETF ADV was up 6.1% YoY to \$5.7bn and European ETF ADV was up 35.3% YoY to \$2.2bn.

Continued growth of institutional clients drove volumes in U.S. and European markets. Elevated market volatility particularly towards month-end was supportive of trading activity.

## MONEY MARKETS

**Repurchase Agreement ADV was up 27.8% YoY to \$326.8bn.**

The sustained addition of new clients on the platform supported strong growth in Global Repo activity. Retail money markets activity remained pressured by the low interest rate environment.

### FOOTNOTES

Numbers include all activity on Tradeweb, Dealerweb and Tradeweb Direct.

Corporate bond volume and trade count numbers reflect all trades reported to TRACE, excluding emerging market and convertible bonds.

Monthly average capped volumes for HG and HY applied to capped trades based on TRACE reporting standards.

Electronically Processed include voice trades processed electronically on Tradeweb.

Day counts for corporate bonds reflect all SIFMA trading days.

On July 12, 2021, FINRA announced changes to its methodology for aggregation of its monthly TRACE Volume Reports. FINRA has confirmed that adjustments were made to address the double reporting of certain ATS trades, but these changes do not affect the real-time TRACE dissemination feeds; accordingly, Tradeweb has made no adjustments to its methodology for calculating U.S. High Grade and U.S. High Yield reported market volumes or trades. Further, FINRA's methodology adjustment to its monthly reporting does not materially change Tradeweb volumes using market reporting standards. Tradeweb's monthly volume reporting therefore remains consistent with prior reported volumes.

Segmentation between HG and HY determined using the following methodology and ratings from Standards & Poor's (S&P), Moody's Investor Services and Fitch Ratings:

- If 2 of 3 of the bond's ratings are equal to or worse than BB+/Ba1/BB+ (but not including "other ratings") then the bond is HY.
- If 1 of 3 of the bond's ratings is equal to or worse than BB+/Ba1/BB+, and none are better, then the bond is HY.
- If the bond is not rated by any agency then the bond is HY.
- If 3 of 3 of the bond's ratings are better than BB+/Ba1/BB+ (but not including "other ratings") then the bond is HG.
- If 2 of 3 of the bond's ratings are better than BB+/Ba1/BB+ then the bond is HG.
- If 1 of 3 of the bond's ratings is better than BB+/Ba1/BB+, and none are equal or worse, then the bond is HG.
- If 1 of 3 of the bond's ratings is better than BB+/Ba1/BB+ and 1 of 3 is equal or worse, then the bond is HG. (i.e. The bond is split rated: 1 HG, 1 HY).

### FOOTNOTES

Numbers include all activity on Tradeweb, Dealerweb and Tradeweb Direct.

Corporate bond volume and trade count numbers reflect all trades reported to TRACE, excluding emerging market and convertible bonds.

Monthly average capped volumes for HG and HY applied to capped trades based on TRACE reporting standards.

Electronically Processed include voice trades processed electronically on Tradeweb.

Day counts for corporate bonds reflect all SIFMA trading days.

On July 12, 2021, FINRA announced changes to its methodology for aggregation of its monthly TRACE Volume Reports. FINRA has confirmed that adjustments were made to address the double reporting of certain ATS trades, but these changes do not affect the real-time TRACE dissemination feeds; accordingly, Tradeweb has made no adjustments to its methodology for calculating U.S. High Grade and U.S. High Yield reported market volumes or trades. Further, FINRA's methodology adjustment to its monthly reporting does not materially change Tradeweb volumes using market reporting standards. Tradeweb's monthly volume reporting therefore remains consistent with prior reported volumes.

Segmentation between HG and HY determined using the following methodology and ratings from Standards & Poor's (S&P), Moody's Investor Services and Fitch Ratings:

- If 2 of 3 of the bond's ratings are equal to or worse than BB+/Ba1/BB+ (but not including "other ratings") then the bond is HY.
- If 1 of 3 of the bond's ratings is equal to or worse than BB+/Ba1/BB+, and none are better, then the bond is HY.
- If the bond is not rated by any agency then the bond is HY.
- If 3 of 3 of the bond's ratings are better than BB+/Ba1/BB+ (but not including "other ratings") then the bond is HG.
- If 2 of 3 of the bond's ratings are better than BB+/Ba1/BB+ then the bond is HG.
- If 1 of 3 of the bond's ratings is better than BB+/Ba1/BB+, and none are equal or worse, then the bond is HG.
- If 1 of 3 of the bond's ratings is better than BB+/Ba1/BB+ and 1 of 3 is equal or worse, then the bond is HG. (i.e. The bond is split rated: 1 HG, 1 HY).
